

A FIFTH OF ALL TEENS AND ADULTS HAVE POLLEN TROUBLE!

– PAZ (PURE AIR ZONE) CREATES A "ZONE" OF CLEAN AIR AND REMOVES SYMPTOMS.

Pollen season 2017 is here, fatigue, itching, watery eyes and nose are just some of the problems that people with allergies suffer and the number of people with symptoms increases exponentially. This affects sick leave and productivity in the workplace. Several scientific studies show that people will be both healthier and more productive - as much as up to 13% - of working in clean indoor air.

ULRICEHAMN 2017-03-31

Indoor air has been for some time worsened due to air pollution, limited ventilation, energy savings and a growing number of new chemicals, pollutants and pollen in the air. At the same time several major scientific studies that people will be both healthier and more productive - as much as up to 13% - of working in clean air. Other scientific studies suggest a reduction in sickness absence from work of up to 30% by working in a good indoor environment.

"Air quality neglect and particles in the air keep increasing. We spend up to 90% of our time indoors, and it is not difficult to realize that we must do something about this problem! Many believe that this is an expensive solution, but the truth is that it does not cost much more than a conventional sound absorbing desk screen" says Tomas Svensson, Product Manager at Götessons.

Götessons has developed a desk screen that enhances your productivity and health. PAZ stands for Pure Air Zone. PAZ combines the functions of sound absorption and air filtration in a patented design. It creates a zone of clean air through the front of the monitor. Draught-free. Silently. Energy efficient. PAZ reduce indoor air of very small particles, pollen can be counted as large particles and removes up to 99.9%.

"Lab tests show that PAZ is superior in creating clean air at the place where you actually sit and work. There are two winners in this development. In addition to better health and greater well-being for those staying in a workplace, it is interesting to employers when it results in increased efficiency at work, better results and less sick leave", says Mats Rydsund PAZ-concept innovator.
